

Business Insights & Recommendations

1. Compensation May Be Driving Attrition

Observation: Payment Tier-2 employees have the highest attrition rate.

Business Insight:

- Employees in Tier-2 may perceive limited compensation growth compared to Tier-3 employees.
- This group could be receiving offers from competitors with better salary progression.

Recommended Action:

- Conduct salary benchmarking for Tier-2 employees.
- Review promotion and compensation progression policies.
- Introduce retention bonuses or performance-based incentives.

2. Bench Time Increases Resignation Risk

Observation: Benched employees have significantly higher attrition.

Business Insight:

- Employees without active projects may feel underutilized, uncertain about career growth, or insecure about their future within the company.
- Extended bench periods can reduce engagement and job satisfaction.

Recommended Action:

- Minimize bench duration.
- Provide reskilling and certification programs during bench periods.
- Assign internal projects or innovation initiatives to maintain engagement.

3. Early-Career Employees Are Most Vulnerable

Observation: Highest attrition occurs among employees aged 24–26 and those with around 2–3 years of experience.

Business Insight:

- Employees at this stage often seek faster salary growth, promotions, and learning opportunities.
- They are highly active in the job market and more willing to switch employers.

Recommended Action:

- Create structured career progression paths.
- Offer mentorship and leadership development programs.
- Increase engagement through learning and advancement opportunities.

4. Master's Degree Holders Require Special Retention Focus

Observation: Employees with Master's degrees exhibit the highest attrition.

Business Insight:

- Highly educated employees may have greater external opportunities.
- Their expectations regarding career growth, compensation, and challenging work may not be fully met.

Recommended Action:

- Offer specialized career tracks.
- Increase exposure to strategic projects and leadership opportunities.
- Review compensation competitiveness for advanced-degree employees.

5. Pune Is a Potential Attrition Hotspot

Observation: Pune shows the highest attrition rate.

Business Insight:

- The local job market may be more competitive.
- Employee satisfaction, compensation, leadership practices, or project allocation in Pune may differ from other locations.

Recommended Action:

- Conduct location-specific employee surveys.
- Analyze manager effectiveness and workload distribution.

- Investigate local market salary competitiveness.

6. Attrition Declines with Experience

Observation: Employees with 5–6 years of experience have lower attrition rates.

Business Insight:

- Employees who stay beyond the initial career stage tend to become more committed and invested in the organization.
- Retaining employees through the first few years can significantly improve workforce stability.

Recommended Action:

- Focus retention efforts on employees with less than 4 years of experience.
- Implement targeted onboarding and career development programs.

7. High Overall Attrition Represents a Business Risk

Observation: Overall attrition rate is approximately 39%.

Business Insight:

- Nearly 4 out of every 10 employees leaving can increase recruitment costs, training costs, productivity losses, and project delivery risks.
- Knowledge loss can negatively affect customer satisfaction and operational efficiency.

Recommended Action:

- Establish an attrition reduction target.
- Monitor high-risk employee segments monthly.
- Use predictive HR analytics to identify employees likely to leave.

Executive-Level Conclusion

The dashboard suggests that attrition is primarily concentrated among:

- Tier-2 employees

- Benched employees
- Employees aged 24–26
- Employees with 2–3 years of experience
- Master's degree holders
- Employees in Pune

These groups should be prioritized for retention initiatives because they represent the highest-risk segments and likely contribute disproportionately to employee turnover. Reducing attrition in these segments would have the greatest impact on improving workforce stability and lowering replacement costs.
